

The Only Analytics & BI Tool Built for Snowflake

Unlock data insights housed inside Snowflake's cloud data platform in record time

Teams are handling a bigger volume and variety of data than ever before, and rapidly investing in Snowflake's cloud data platform to scalably store, centralize, secure, and access this information.

The problem? Most analytics and BI tools fail to deliver a human connection to data. Gleaning insights from BI tools has required coding expertise, forcing business teams to rely on data experts for the answers they need. Report request queues delay decision making and drive business experts to extract data to spreadsheets, which cause governance issues.

Sigma has transformed the data analysis experience by giving everyone direct, real-time, governed access to the cloud data warehouse, empowering teams to collaborate and quickly uncover insights that drive business outcomes.

Make Self-service a Reality

- Analyze data visually using the familiar and intuitive Sigma Spreadsheet
- Create dynamic visualizations and easily dig into the underlying data
- Experience the full power of SQL without writing a single line of code

Accelerate Time to Insight

- Model data once for reuse across analyses, teams, and internal/external applications
- Explore ad hoc questions freely without having to update the central data model
- Redirect highly skilled data experts to focus on more complex and innovative projects

Modernize Data Governance

- Gain instant, direct, guided access to your CDW – no extracts, copies, or caching
- Achieve immediate visibility into the data questions teams are asking
- Visualize, model, and update data — all in the warehouse

Visit **Snowflake's Partner Connect** and try Sigma for free with just two clicks!

Simply log into Snowflake and navigate to the Partner Connect tab, where you'll see Sigma and our free 14-day trial.

In just two clicks you can explore your data like never before and start unlocking the true value of your Snowflake investment.

“With the combined compute speed and analytics capabilities of Sigma and Snowflake, we reduced our time to data insight by 93%.”

Jessica Nielsen

Data Analytics Manager,
The E.W. Scripps Company
